

1. DATE - TIME GROUP 22 Feb 53 23/0200Z	2. LOCATION Dover AFB, Del.
3. SOURCE Varied	10. CONCLUSION Astro (VENUS or JUPITER)
4. NUMBER OF OBJECTS One	
5. LENGTH OF OBSERVATION 40 Min.	11. BRIEF SUMMARY AND ANALYSIS White object changing colors hovered for 30 min then disappeared slowly over horizon. Object appeared to be hovering in a haze layer. Two a/c made unsuccessful attempts to close in on object.
6. TYPE OF OBSERVATION Ground-Visual Air-Visual	
7. COURSE	COMMENTS: The planet "Jupiter" is in the approx position in the sky at this date & time although higher from the horizon than the reported unknown. Factors pointing toward astro solution. 1. Object remained in approx same position 40 min as observed from ground & air. 2. Began sinking in the W (Venus would do this). 3. Presence of haze layer would make the light change in intensity & give apparent movement N to S, both of which were attributed to object. 4. Astronomer: Was Venus.

1. "Approximately 2100 hours 22 February 1953, 2nd Lt Leland E. Maines Jr., AG 1354252, Officer-of-the-Day, this base, received telephone call from a Mr. Oscar A. Nichols, civilian, of R.D. #2, Milford, Delaware, who had a strange object in the sky under scrutiny. Nichols could not describe the size of this "disc-shaped" object but stated that it had a predominantly yellowish color with a "red, then a very bright white light turning not too fast, but steady, under the yellow glow." From his position at Milford (Thompsonville) Delaware (approximately $75^{\circ}24'W$ by $38^{\circ}58'N$), placed the object over the town of Frederica, proceeding from a southerly course to north.

2. "Maines, at the Base Theater (approximately $75^{\circ}27'W$ by $39^{\circ}07'N$), after receiving information from Nichols, observed an object fitting reported description at an estimated altitude of 1000' due West of the Base, over the city of Dover, but at an undetermined distance. Maines summoned Airman Second Class Pasquale A. Candide, AF 12294106, Assistant Theater Manager, to verify his observances. Maines and Candide substantially agreed that the object appeared approximately 4° to 6° above the horizon, appeared to revolve with alternating colors from red, green, blue to white, in a manner similar to the brilliance reflected from the facets of a diamond. Their period of observation was over a half-hour, beginning at 2100 hours.

3. "When Maines directed attention of Control Tower personnel to the location of the object he was informed by Airman Basic Leonard G. Whitney, AF 11188104, that he and another operator had noticed the object since 1800 hours and jointly agreed that it was "probably the 'Evening Star'." About 2130 hours, when Dover Tower was contacted by pilot of military aircraft of the 96th FIS, New Castle County Airport, Delaware, Whitney observed said object gradually fading from view in a northwesterly direction.

4. "In response to alert from Maines, two aircraft from the 96th FIS, New Castle County Airport, Delaware, on Combat Air Patrol were assigned to close with the object. Plane number one had to land because his fuel was low. Plane number two piloted by 1st Lt Notley Maddox pursued the object on a westerly heading after climbing to 15,000 feet. At this altitude the object appeared level with him but at an undetermined distance. Maddox climbed to 25,000 feet on the same heading and found the object slightly beneath him and in a haze layer. Object was described as predominantly white in color and did not appear to be moving. Maddox flew as far as Baltimore vicinity without closing on the object and considered further efforts fruitless. Radar Operator reported no scope sight. Negative traffic in area of original and subsequent object sighting.

5. "Existing weather at time of observation was clear sky, no haze, no clouds, visibility seven (7) miles, sea level pressure 288, temperature 30° , dew point 23, surface winds calm, altimeter reading 3037. Washington, D.C. 1600 hour forecast 22 February 1953 revealed winds aloft at 12,000 feet from 240° at 50 knots, 16,000 feet from 240° at 70 knots, 20,000 feet from 240° at 110 knots.

6. "All witnesses appeared as sincere and creditable persons and it is believed that "estimates" as to altitude, and other data contained in their statements which might appear implausible or incongruous to the trained technician, would constitute an honest error in judgment rather than an intended hoax or deception for purposes of notoriety or other."

I again contacted New Castle "hotline" seeking a further report. My informant reported only what he had been able to hear over his radio. He stated that the pilot had seen the object, but had been unable to close with it, and had eventually lost it altogether.

No further information was forthcoming until the next morning when a full report was obtained from the Intelligence Officer of the 96th at New Castle. The information in his report is contained in other sections of this report.

eland E. Maines Jr.
2d Lt USAF
A01854262
807th Air Base Squadron
Dover Air Force Base, Delaware

I again contacted the tower and, following my directions, the tower personnel were also able to observe the object. However, they informed me that the object had been there "all evening".

My next efforts were directed to scrabbling an aircraft for a closer look. The 46th Ftr Interceptor Sqdn at Dover was off alert and was being covered by the 96th at New Castle AFB. I contacted the "hot room" at New Castle and supplied the necessary information. I was informed that two (2) aircraft were on CAP in the area and that they would be contacted immediately.

I then went to the tower and put the glasses on the object. Time now was approximately 2120. The object appeared to be red in color when observed through the glasses. It was diminishing in size, giving the impression of movement away from my viewpoint.

While in the tower a New Castle jet called in and asked for our location of this object. The tower operator estimated the object to be due West of the field and seven miles. The pilot of the aircraft stated that it was further away than seven miles inasmuch as he could see it from New Castle. No further word from this aircraft was heard at Dover tower.

I continued to observe the object through the glasses. It moved neither right or left. It was rapidly diminishing in size. At approximately 2140 it disappeared entirely. I then left the tower.

My wife [REDACTED] and I
Oscar [REDACTED] will swear to this
statement to be the truth.

[REDACTED]

To Dover Air Force Base
Dover Del.

In request for statement from Lt. Blair
for my observance on the night of Feb.
22, 1953.

My wife and I first saw what we thought
was a bright star about 8:30 P.M. as we watched
the object was getting closer. At 9:00 P.M.
we could make out very clear a white
shaped and very bright yellow glow
of light spinning in a clockwise direction.
The disc seemed to be from 600 to 800 feet
ups and about a mile from us. As we
watched under the spinning bright
yellow light there was a red then a
very bright white light turning not
so fast but steady under the yellow
glow. The object stayed in one place
for awhile and would move straight
up for a hundred feet or so very sudden
then it would move down. At 8:45 P.M.
the object started to move off in a
north west direction from our home.
It kept on moving off in a horizontal
direction until it disappeared over the
horizon, it seemed to go down over the
horizon just as a ship on the ocean does.
JUL 2 1953 (over)

sky. I set its position by using the telephone pole to the right of the theater. Then returned inside to tell the O.D. He asked me to keep an eye on it. Bay 213.

the object had drop down to the horizon, about a minute or so later it had dropped behind a few buildings here on the base, and could not be seen. I called the O.D. who was at the base tower. Told him of the object, and that I could not be seen from my position. He stated he still had it in the glasses.

File #3 - IP-171-52

(1 Feb. 53

Dover Air Force Base
Delaware

At 2100 hrs, on the 22nd of Feb. 53.

The O. D. received a call at the base theater.
I called him to the phone, I am the Asst
Maj. here. I was about to leave the office,
when he asked me to look outside at a
Northwly direction about 4 to 6 degrees above
the horizon, and to note if any object
was to be seen there. I took a check,
and then no. It was about, from my
position, about N. by E. W., some 6 degrees
above the horizon. I could not make out
its shape, it looked like a spot of
light in the air changing color, which
was Red, Green, Blue, Green, Whit. It
was too alone to be a star, or one of
the planets in our solar system. And
^{had no stars been seen shown green in the}
air - to IR-171-53

Dover Air Force Base
24 February 1953

On the 1700 - 1900 shift in the Control Tower at Dover A.F.B. Delaware, the night of February 23, 1953, I received a telephone call from the Officer of the Day asking me to look to the South of the Base to see if I observed any unusual objects on the horizon. I advised him I saw nothing on the horizon but stars. This call was between 2030E and 2100E. At approximately 2115E the Officer of the Day came to the tower, and stated that there was an unusual object to the West of the Base. He told me that he had watched this object for some time and that it seemed to be rotating, and color from yellow to orange. I told him that the operator on duty with me and myself had agreed earlier that it was a large star. We noticed this object and agreed that it was probably the Evening Star. This was shortly after dark, about 2100E. At about 2130E a military aircraft from New Castle County Airport called Dover Tower and advised that it had attempted to fly to this object, and had flown as far as Baltimore, and was unable to reach it. The pilot did not tell the Tower what he himself thought it was. Shortly after the call from the aircraft, the object began to fade from view, and it seemed to be slowly moving to the North-West.

It is my opinion that subject object was a star. In a discussion with other Tower Operators I learned that they had seen a large star in approximately the same position in the sky as I had, and I believe this star could possibly be the Evening Star.

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency) 96th Ftr Intop Sqdn New Castle County Airport Wilmington, Delaware	REPORT NO.	PAGE 1 OF 4 PAGES
---	------------	-------------------

1. In accordance with AFL 200-5, 29 April 1952, the following report is submitted:

a. This unit was alerted by the CD of Dover AFB at approximately 0200Z 23 February 1953 that a very bright white light was heading toward New Castle. One F-94B aircraft with pilot 1st Lt Joseph Cid and radar observer 2nd Lt John R. Monymaker was in the air at this time and was alerted by the New Castle Tower to be on the look-out for this reported object. The above pilot and radar observer what they believed to be the reported object while on the final approach to the runway 27. The object appeared straight ahead off the opposite end of runway 27 as a very brilliant white light moving from south to north at an estimated 2 miles distance and at an altitude of 1000 feet. The intensity of the light kept changing. Pilot ~~██████████~~ decided against investigating the light as he had only 50 gallons of fuel remaining and another F-94B aircraft was in take off position. The aircraft in take off position on runway 27 (pilot 1st Lt Motely J. Maddox and radar observer 2nd Lt Leonard A. Levy) was airborne at 23/0215 and observed the light immediately after take off at approximately 15-20 degrees to the starboard. The pilot could not estimate the objects distance but reported that it was extremely great. Aircraft continued climbing on a heading of 270 degrees keeping the light under surveillance. Upon reaching 15000 feet the light appeared to be at the same altitude as the aircraft and still approximately 15-20 degrees starboard. Pilot continued climbing leveled off at 25000 feet. The light then appeared slightly lower than the aircraft, still at approximately 15-20 degrees starboard. The aircraft flew on a westerly heading for approximately 15 minutes but did not close on the light. The unidentified light did not move. On the preliminary teletype report (FSCG 0063) the above same information was given but after further investigation the pilot, who was previously a navigator, states that after checking an almanac he definitely believes the light to be the planet jupiter. The New Castle Tower operator, who also observed this light, called the local newspaper with the thought that perhaps others had seen this light and called the newspaper office to report same. The local newspaper stated that they had seen the light in question and believed it to be the planet mercury.

b. Pilot 1st Lt Maddox has been a navigator for 6 years and a pilot for 3 years with a total of 1200 flying hours. The radar observer, 2nd Lt Leonard A. Levy has been flying as a radar observer for 11 months and has 109 hours of observer time.

c. The weather during sighting was clear, unlimited visibility with a very light haze layer at 20000 feet.

Dover Air Force Base, Delaware

22 February 1952

At approximately 2100 hours, 22 February, acting in my capacity as O.D., I accepted a call from a Mr. [REDACTED], Milford, Delaware - Phone [REDACTED]. Mr. [REDACTED] stated that he had observed and was observing a strange object in the sky. He estimated the object to be 4-5° above the horizon from his viewpoint, moving South to North and approximately over the town of Frederica, Delaware.

He further stated that the object appeared to be spinning and that it was predominantly yellowish in color. However, it also appeared to be slowly changing colors, turning white, green, and red at various times.

I next contacted the Dover AFB tower to see if the tower personnel were able to observe this object. I was informed that they could not see any object of the above description in the direction I gave them.

I then stepped outside of the Base Theatre and was able to see this object due West of the base. I estimated this object to be about 1000 feet and over the town of West Dover. Mr. [REDACTED] had further stated that the object best resembled the light thrown off by an electric arc welder. My impressions of the object tallied with those of Mr. [REDACTED]. I, too, observed the gradual change of colors. It was much the same as the myriad of colors thrown off by a cut diamond when
